- - - SENSAPOLE - COOL SENSATION (20 laundries)

SENSAPOLE - COOL SENSATION

A special blend of plant extracts (birch among others) absorbs heat. The finish is triggered by natural body humidity and will continue to cool down the fabric as long as the humidity persists.

The LanXESS diagram shows the cooling effect of the finish and the washability (20 laundries at 40 °C). The vesicle structure is the ideal carrier for cationic charges, resulting in an excellent washing & drycleaning durability.

The extract is encapsulated in a multi-layer vesicle structure on nanometer level.
(nanometer = 1 billionth of a meter)

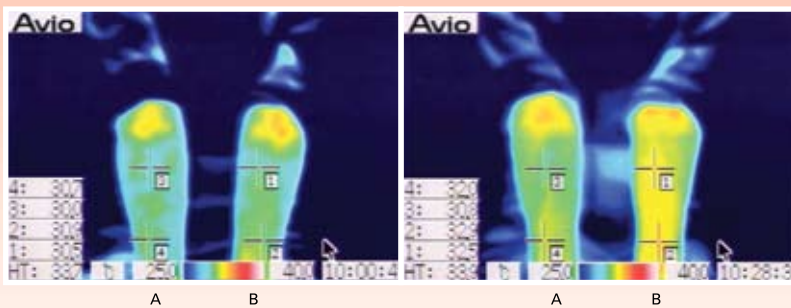

High tech finish developed by LanXESS Japan

INITIAL

AFTER 20 MINUTES

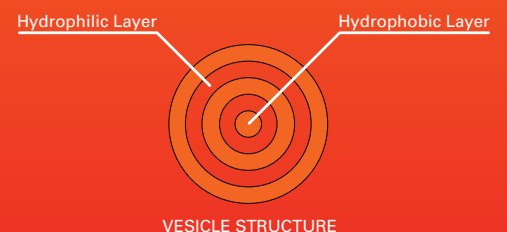

A: arm wrapped in non treated fabric
B: arm wrapped in treated fabric

SENSAPOLE - HOT SENSATION

A special blend of plant & flower extracts (red pepper among others) increases blood circulation in the skin and provides a warm soothing feeling. The LanXESS thermograph proves the functionality of the finish on a forearm wrapped in treated and non treated fabric. The vesicle structure is the ideal carrier for cationic charges, resulting in an excellent washing & drycleaning durability.

The extract is encapsulated in a multi-layer vesicle structure on nanometer level.
(nanometer = 1 billionth of a meter)
